

Technical Bulletin #115

FBP3000 DELETION PEN

For Fujifilm™ Baked Metal Plates

Burnishine worked closely with Fujifilm™ to develop a pen that works with several of their baked metal plates. **FBP3000 Deletion Pen** is unique. It has 2 tips which allows printers greater control when making corrections. This pen effectively removes unwanted images and can save you time and money by eliminating the need to remake plates.

FEATURES

- 2 tips – one medium and one broad
- Works with LH-PSE and LH-N13 baked metal plates
- High quality barrels, end caps and tips.

BENEFITS

- Gives printers greater control when making corrections.
- Saves money – no need to remake plates
- Pens last longer and are more durable than other pens on the market.

DIRECTIONS: Remove ink if necessary. Apply in circular motion with **light pressure**. Wipe with dry cloth/rag during the deletion process. This will allow fresh chemistry and quicker deletion times. When image is deleted, clean area with plate cleaner and resume printing.
