KP4 DELETION PEN

For Kodak Thermal Plates

Burnishine worked closely with Kodak to develop a pen that works with some of their most popular thermal plates – including baked Electra XD. Our collaboration with Kodak allowed us to formulate a pen that is effective and easy to use.

FEATURES

- 2 tips – one medium and one broad
- Works with:
 - Trillian*
 - Electra XD baked
 - Unbaked Thermal Gold
- High quality barrels, end caps and tips.

BENEFITS

- Gives printers greater control when making corrections.
- Saves money – no need to remake plates
- Pens last longer and are more durable than other pens on the market.

*For best results, do not allow deletion fluid to sit too long on the plate.

DIRECTIONS: Remove ink if necessary. Apply in circular motion with **light pressure**. Wipe with dry cloth/rag during the deletion process. This will allow fresh chemistry and quicker deletion times. When image is deleted, clean area with plate cleaner and resume printing.
