## PUTZ POMADE LIQUIDFLOW & PASTE

PCN # Y3 LIQUIDFLOW

PCN #R1 PASTE

**Putz** is the original deglazer in the graphic arts industry. It is applied **while the press is inked up**, and works great for deep cleaning and restoration of neglected and overused rollers and blankets. Putz uses microfine granules to remove all traces of ink and other contaminants from rubber rollers, and blankets, and helps prolong roller life. **Putz is available in Liquid and Paste.**

**Putz can also be used to clean OPC drums on digital presses.**

### FEATURES

- Microfine granules that rejuvenate & recondition
- Applied while press is inked up
- Non-flammable; non-toxic

### BENEFITS

- Deep cleans rollers and extends roller life. Prevents stripping and glazing.
- Saves time and money!
- Safe for printers and the environment

**Directions for quick color changes or routine maintenance:** Apply a thin bead to rollers while press is inked up and idle press for 3-5 minutes. Remove with your favorite roller or blanket wash. For heavily glazed rollers or reconditioning, apply while press is inked up and allow press to idle for 10-15 minutes. Remove with roller wash.

**Directions for cleaning OPC drums:** Apply to a lint-free cloth and wipe over drum to remove toner particles. Use a damp (not wet) soft, lint-free cloth to remove Putz and run about 50 sheets to prepare unit for printing. Or buff down dry with a soft, lint-free cloth prior to printing.
